AGENTIC COMMERCE / MERCHANT BRIEF

Help AI find suitable stock and explain how to buy it

24 Oct 2026 · Asia/Shanghai · English site / USD · 3 products, 5 SKUs

The sampled catalog has a readable foundation. Prioritize quantity pricing, variant clarity and return-policy consistency so AI answers better reflect real purchasing conditions.

3 / 3 products	5 SKUs	30 days ≠ 7 days
Structured products and offers	Readable price, currency and stock labels	After-sales support versus returns

Three merchant priorities

01 Make quantity pricing explicit

All three sample pages show volume price tiers, while their Product / Offer data lists base prices. Tie each tier to quantity, SKU and selling unit so bulk inquiries can use the applicable rate.

02 Align return promises across sources

All three products specify a 30-day structured return window. The full policy separates 7-day returns from 30-day support for product issues. Align the reason, deadline and return-shipping responsibility.

03 Match the exact variant and destination

The gold and steel-color rings have different prices; the earrings are sold by the pair. Keep color, component materials, selling unit, freight and tax conditions together in the purchasing answer.

A merchant service opportunity

Catalog improvement + quantity quotes and landed-cost clarity + policy synchronization + AI referral measurement. Help merchants enter the buyer's shortlist, then reduce misunderstandings about price and purchase conditions.

AGENTIC COMMERCE / MERCHANT BRIEF

Three products, three buyer questions

Real page evidence illustrates the opportunities. These example questions have not been tested on AI services.

Water-drop pendant necklace

NH10163663

US$0.95 each; the 200+ tier shows US$0.64 each

The page lists 304 stainless steel, 18K gold plating and PVD. Its Offer price is US$0.95, with no quantity tiers in that offer.

Buyer question: what is the goods subtotal for 200? If the tier applies, 200 × 0.64 = US$128, versus US$190 at the base price. Freight, taxes, stock and eligibility still need checking.

Open the necklace product page

Heart-shaped earrings

NH12870930

Gold / silver: US$1.83; the variant specifies 1 pair

The body is listed as 316L stainless steel; the ear pin as 316 stainless steel. Minimum-order text says “1 piece,” while the variant says “1 pair.”

Buyer question: how many earrings are included, and what are the pins made of? State pricing and minimum order per pair, distinguish component materials, and avoid a universal allergy-free promise.

Open the earrings product page

Geometric open ring

NH12158910

Steel color: US$0.30 each; gold: US$0.39 each

The two SKUs have distinct offers, but share a name containing “18K Real Gold Plated.” Color and “Adjustable Opening” appear mainly in descriptions and URL parameters.

Buyer question: what does the gold version cost? Cite gold SKU NH54141862 at US$0.39 and confirm its finish. Do not substitute the steel-color variant's lower price.

Open the ring product page

Materials, plating, waterproof and non-tarnish wording are merchant descriptions, not independently tested properties. The subtotal illustration is neither a confirmed order quote nor a landed-cost estimate.

AGENTIC COMMERCE / MERCHANT BRIEF

Make purchase promises precise

Different sources on the same site need clearer conditions and consistent policy meaning.

Item checked	Product-page structured data	Full policy / page copy
Return window	All three: merchantReturnDays = 30.	Request returns within 7 days; 30 days covers after-sales support for confirmed product issues.
Return shipping	Customer responsibility across all three products.	Buyer pays for a change of mind. Merchant-caused damage or incorrect items do not require buyer-paid return shipping.
Processing time	All three: 1–3 days.	Shipping page: usually 2–5 days, depending on quantity. Homepage FAQ: 1–3 business days.
Freight and taxes	US destination, US$0–100 freight range and 5–7 transit days.	Shipping quote needs destination, weight and dimensions. Taxes depend on country and route; some routes include duties.

Priority fix: one consistent set of conditional policies

Maintain return windows separately from issue-support periods and explain fees by return reason. Align processing, transit and tax terms by warehouse, route, destination and order quantity, with source links. US$0–100 is not a quote for this sample order.

How to verify value after the changes

Repeat fixed buyer questions on agreed AI services. Track merchant inclusion, correct product citations, quantity and variant pricing, and return-policy accuracy. Then connect the results to merchant-side AI referrals, inquiries and orders.

Scope: 7 HTML pages — homepage, 3 products, shipping, returns and customs — plus robots.txt and the sitemap index. A 10-second crawl interval was observed. GPTBot's robots exclusion does not establish that all AI search services cannot index or recommend the site.

Home · Shipping · Returns · Customs

Live stock, account-specific prices, actual freight/taxes, checkout, materials and real AI recommendations were not verified. No webpage screenshots are included; cases use checkable text and numerical excerpts.
